To whom it may concern.

I have known Mr. Ivor Leatt of 121, Westfields, St Albans AL3 4JR for about 15 years, and have engaged with him in scientific discussions about electro-magnetic theory; the propagation of scientific knowledge, and other subjects, over the whole of this period.

In October 2007, he was taken ill and was admitted to several hospitals. His condition deteriorated, and he was in the Intensive Care Unit of the Watford General Hospital for 3 months in 2008. He was critically ill during this time, and was in intermittent coma for several days. I visited him approximately weekly during this period. Nevertheless, he has recovered completely physically (he goes on walks, as well as intellectually. He can think just as sharply as he could before his illnesses. Indeed, he is still engaging in

Correspondence with journal editors and other scientists on obscure points of electromagnetic theory - as he has been doing for the last 30 years. Everyone, including me, has been astonished and admiring of his complete intellectual and physical recovery.

Harold Hillman (formerly Reader in Physiology at the University of Surrey).
