| | ASA Status: | 2 |

| | |
|-----------------------|--------------------|
| IV Medication | Other Medication |
| IV Midazolam 002.0 mg | Fentanyl 100 mcg |
| IV Buscopan | Oxygen: 002 Litres |

Co Morbidities: Other

| | |
|--------------------------------|----------------------|
| INDICATIONS | |
| Planned Therapeutic Procedure: | Oesophageal dilation |
| | |

| | |
|-----------------------------|---------------------------|
| EXAMINATION | |
| Abnormal Examination | |
| FINDINGS | |
| Stricture / Stenosis | |
| Type: | Benign |
| Severity: | Moderate 5- 10mm diameter |
| Site: | Mid Oesophagus |
| Proximal Extent from Teeth: | 25 cm |

PROCEDURE PERFORMED

Procedure: OGD & dilation Examination To: 2nd Part of Duodenum

OUTCOME

Discharged to GP's care Patient informed of the result?: Yes

COMMENTS:

OGD for repeat dilatation of benign oesophageal stricture. Complex previous history with dilatations and stents, last dilated 7/7/16 to 11mm.
Stricture at 25cm would not allow scope to pass. Dilated to 10mm, 11mm, 13.5mm with no immediate complications, after which the scope passed to D2 without difficulty. No further planned dilatations for now, but patient to contact Dr Fullard if symptoms recur, in order to organise a repeat.

Signed
