Wor Catt,  
Crouch Hall,  
Redbourn,  
Herts.

Dear Wor,

Your phone call last night was very exciting. I think I see the transformer now in terms of crosstalk - if current in wire ~~is~~ is effect of passage of energy current then current will be induced in 'secondary' as well as 'primary' additional turns just add.

At weekend will be at Leeds 685211, just in case you try to ring me.

We must get together soon,

Dave

Dear Ivor,

Further to our telephone conversation last night I am enclosing a copy of my note on the transmission line model of a capacitor, I am now looking at the parallel L-C circuit to see if I can get the sine wave out of this; it looks very hopeful.

I am enclosing a brief c.v. which I hope will answer the purpose, unfortunately I have no suitable photograph to hand so, if you think this is important, let me know and I will have one taken.

I will let you have my comments on your note on 'Displacement Current' when I have looked through it more thoroughly - I do in fact have a copy - my mistake!

I hope to see you soon, regards to Brenda,

Yours sincerely

Dave Watts
